

MiningIDEAS

Our Market

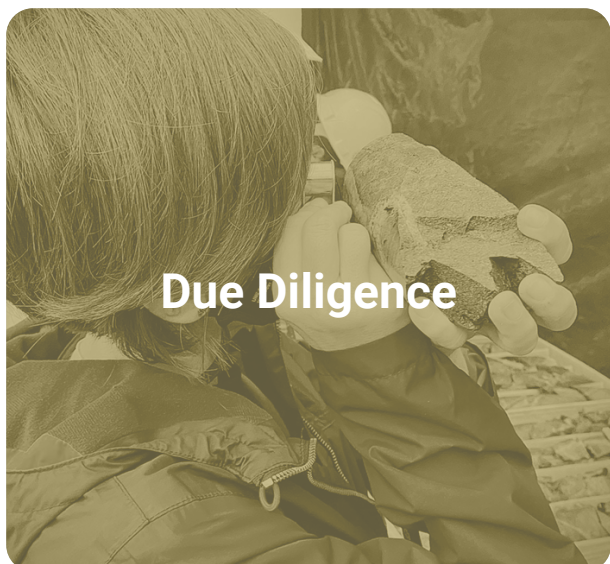

Consulting and Services

MiningiDEAS is a company that focuses on geological and engineering services, consulting, operations management, and technological development for the mining industry.

Ariana Carrazana

Board Director and CEO

acarrazana@miningideas.com

MiningiDEAS advises companies during transaction operations such as trading, financing, and initial public offerings of mining projects. Our work focuses on a precise reliability measurement of mineral resources and ore reserves, evaluation of proper operations management and study of fatal flaws. We help our clients make the right investment decisions under strict confidentiality.

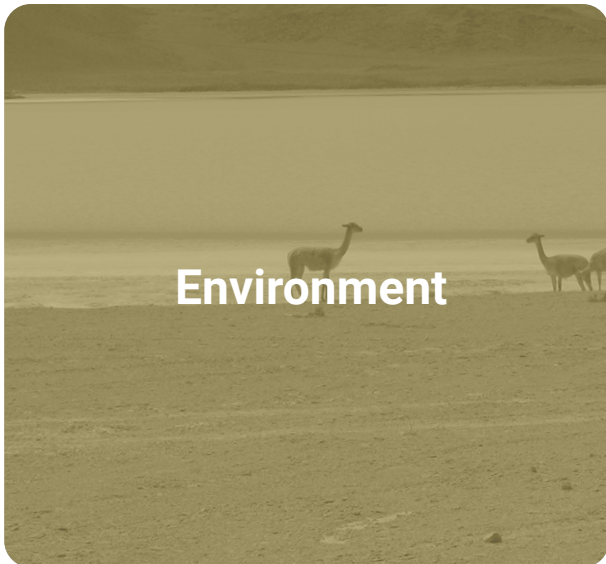

MiningiDEAS identifies operational losses, corrects deviations, and removes inefficiencies, with the intention of reducing costs and increasing the mining processes productivity. MiningiDEAS relies essentially on two bases: Advanced Analytics techniques and Lean Management methodology. We recommend the best possible practices to operational teams through performance review meetings.

MiningiDEAS offers engineering services and studies for mining projects. Our strength is underground mining, specifically the ventilation systems modelling and fire simulations. MiningiDEAS helps clients in obtaining exploitation permits from government authorities. We work with cutting-edge software and the best operational practices.

MiningiDEAS advice on the implementation of technologies for the mining industry. We also adapt technologies used in other industries and we teach our clients the advantages of including them into the production systems. One of MiningiDEAS missions is to promote and increase mass access to these technologies. We work hard on digitizing and automating operational activities in order to increase business value.

MiningiDEAS provides 3D modelling services and environmental monitoring and assessment. We are focused on continual improvements of processes from the exploration to the closure mining stages. We set up technologies allowing projects and operations to be more environmentally efficient. The technological platforms developed by MiningiDEAS have flexibility and scalability to guide our clients in fulfilling their sustainability objectives.

MiningiDEAS trains companies personnel and suppliers in the mining industry in order to increase their knowledge about the business and its processes. Our teaching methods allow users to acquire tools and concepts in an effective and appropriate manner. Our trainings cover the entire value chain: exploration, operations management, mine planning, mineral economics, mineral processing, geostatistics, technologies, software use and new business discovery.
